

The IETF

- Internet Engineering Task Force
- formed in 1986

expansion of US ARPANET-related government activities Internet Configuration Control Board (ICCB) (1979) and Internet Activities Board (1983)

was not considered important for a long time - good!!

not "government approved" (US or other) - great!! although funding support from U.S. Government until 1997 people not companies

"We reject kings, presidents and voting. We believe in rough consensus and running code"

Dave Clark (1992)

IETF Overview

Internet Standards R Us

most Internet-related standards were developed by, or are maintained by, the IETF

not including physical network or page display standards

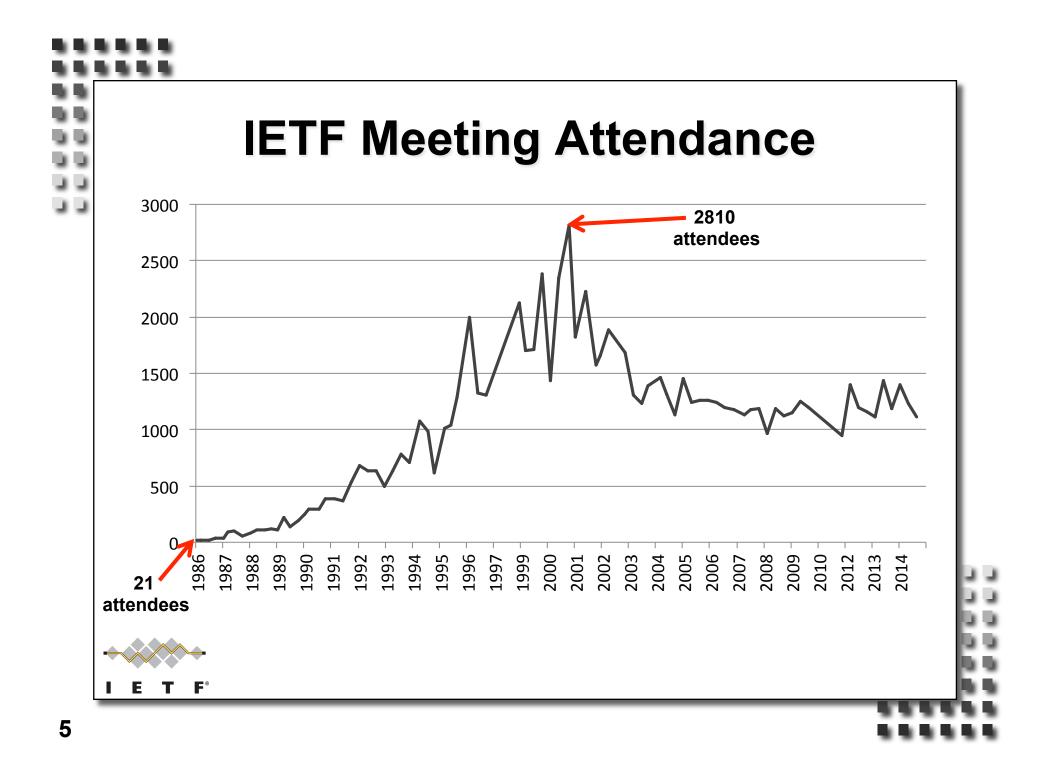

does not exist (in a legal sense), no members, no voting

The IETF is "an organized activity of the Internet Society"

1K to 1.5K people at 3/year meetings

many, many more on mail lists

IETF Purpose

- develop and maintain standards for technologies used to provide Internet service or to provide services over the Internet
- ensure that the technology can perform needed functions ensure that the technology will support the proper scale of deployment and usage
- ensure that the technology itself is secure and can be operated securely
- ensure that the technology is manageable
- IETF produces standards and other documents

IETF "Standards"

IETF standards: not 'because we say so' standards they are standards only if people use them formal SDOs can create legally mandated standards IETF standards are published in "RFCs" no formal recognition for IETF standards by governments or "approved" standards organization but some government standards refer to IETF standards lack of formal government input "a problem" at least to some governments no submitting to "traditional" standards bodies

IETF Work Team

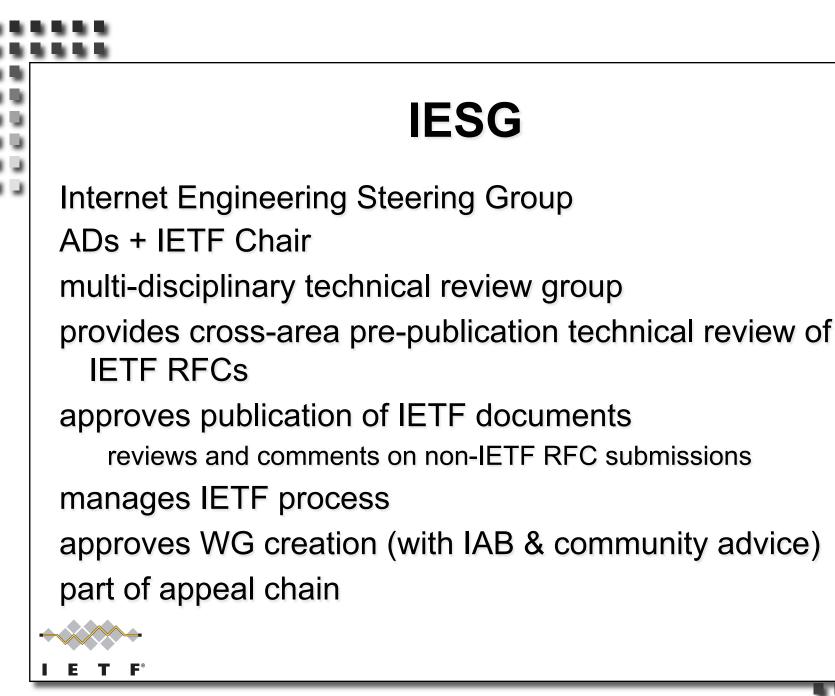

128ish "active" Working Groups Working Group Chairs: manage working group Document Editors: edit individual documents 8 Areas, each with Area Directors (ADs) APS, GEN, INT, O&M, RAI, RTG, SEC, TSV APS & RAI may be merged into an ART area IETF Chair: AD for General Area, chief spokesperson Internet Engineering Steering Group (IESG): technical review, process management (ADs + IETF Chair) Internet Architecture Board (IAB): architectural guidance & liaisons

Area Directors

Areas have 1, 2 or 3 ADs responsible for setting direction in Area responsible for managing process in Area approve BOFs & propose working groups ensure working groups follow proper process have authority to change working group management generally with IESG consultation

review working group documents prior to IESG review

.....

How the IETF Work Gets Done

generally, IETF technology development is done in Working Groups

but can be an individual effort

proposals are published as working documents

"Internet Draft"

working document revised & republished based on discussion

working document submitted to AD for IESG review

AD performs technical and process review of document

returns document with comments if AD finds issues

E T F[®]

.....

How the IETF Work Gets Done, contd.

when AD satisfied, the IESG issues IETF-wide "Last Call" for comments

IESG performs interdisciplinary technical review of proposal & reviews Last-Call comments

returns document to WG with comments if IESG finds issues

when IESG satisfied, the document sent to RFC Editor for publication as RFC

.....

Birds of a Feather Sessions (BOF)

often precedes the formation of a Working Group

group of people interested in a topic convince an AD that they have a good idea - one worth exploring & that there are enough interested people to do the work

need description and agenda before a BOF can be scheduled

and sometimes a draft charter for a working group

BOFs generally only meet once

can lead to a WG or can be a one-time thing

E T F°

Working Groups this is where the IETF primarily get its work done most discussions on a WG mailing list face-to-face meetings focused on key issues (ideally) note: face-to-face meetings generally quite short "bottoms up"

i.e., generally proposed by IETF participants, not ADs, IESG or IETF Chair

makes it hard for the IETF leadership to commit the IETF to do something

often preceded by a BOF

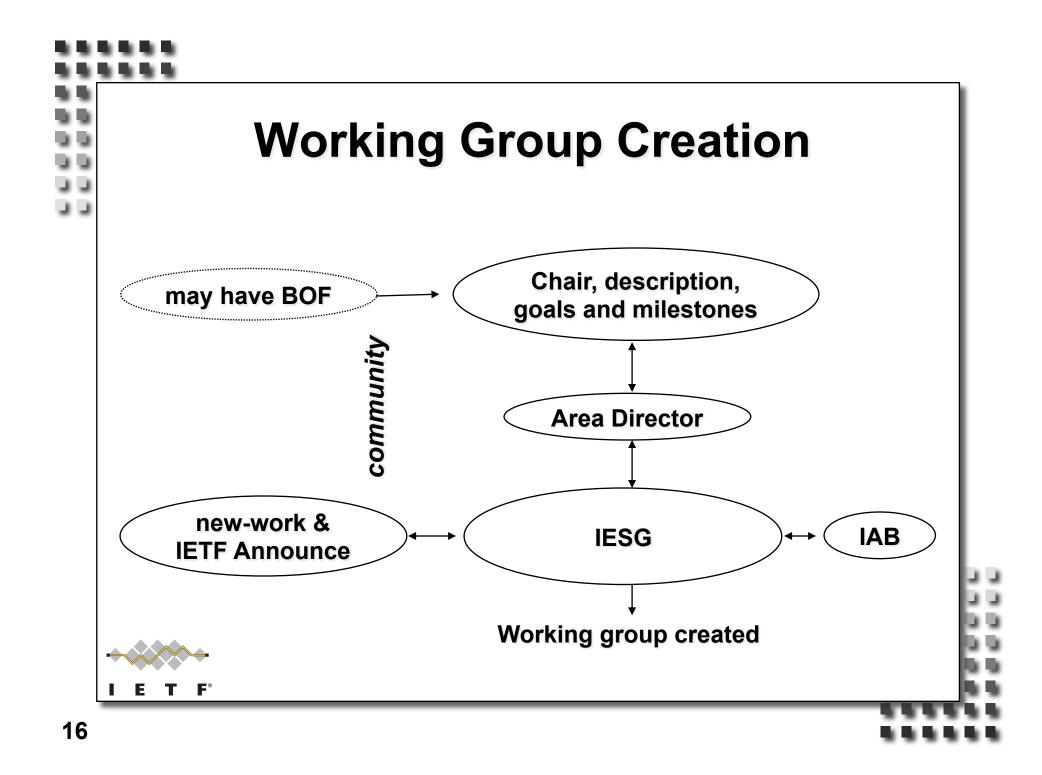

. -

Working Groups, contd.

Working Groups are focused by charters agreed between WG chair(s) and area director restrictive charters with milestones charter approved by IESG with IAB advice after public announcement for comments announcement goes to other SDOs to check for overlaps IESG has final say on charter working groups are closed when their work is done at least in theory

A Working Group Session

WGs only meet for a few hours at an IETF meeting most working group work is done on the WG mailing list often only specific unresolved issues are discussed at meetings so read the IDs and mailing list before the session advice: listen (and read) before speaking sessions are being streamed & recorded

so speak directly into the mike (don't look at the questioner)

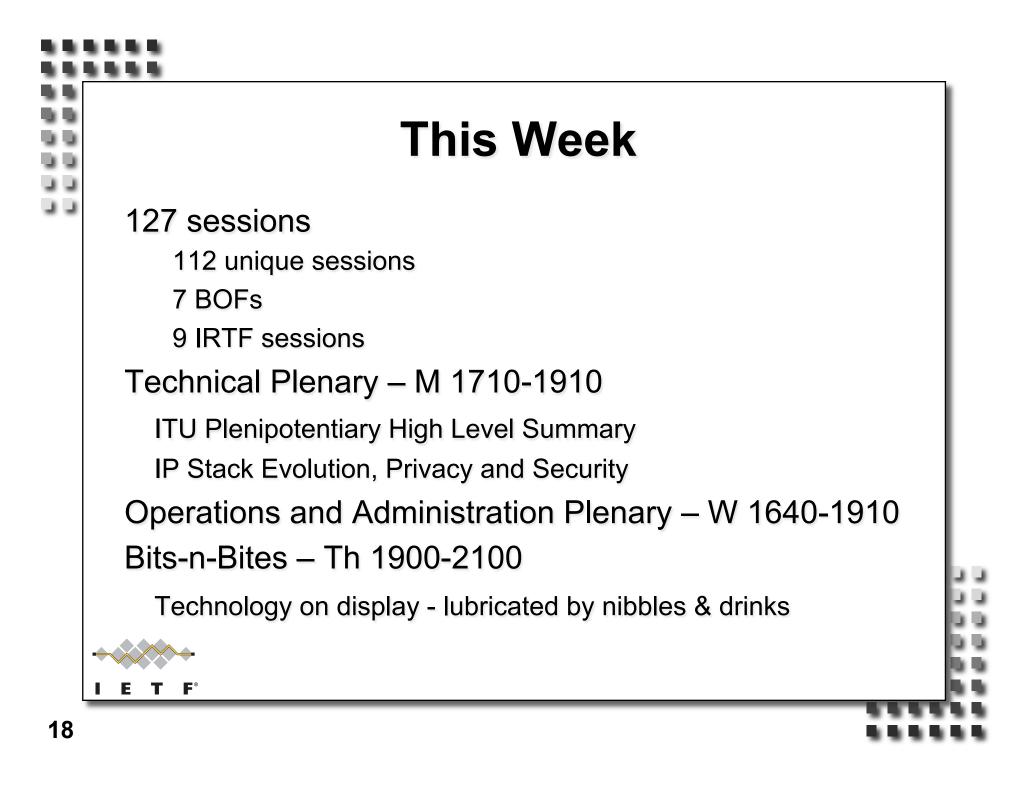

say your name - every time you get to the mike

scanned & posted - original not retained

for the people in audio-land & for the scribe(s)

sign the "blue sheets"

record of who is in the room - required for openness

.....

Rough Consensus

no defined IETF membership - just "participants" "Rough consensus and running code..." does **not** require unanimity chairs should ensure that everyone has their say no formal voting (can not define the constituency) can do show of hands or hum - but no count disputes resolved by discussion on mailing list and in face-to-face meetings final decisions must be verified on mailing list to ensure those not present at face-to-face are included but taking into account face-to-face discussion

IETF°

IETF Documents

all IETF documents are open

i.e., anyone can download and make copies (in full)

Internet Draft

IETF working documents

some I-Ds are working group documents

RFC

archival publications (never changed once published) update or correction gets new RFC number

IETF Document Format

English is the official language of the IETF but blanket permission is given to translate any IETF document (in total) into any language for any reason ASCII is the mailing list and general document format Moving to a XML-based authoritative format for documents will produce pure-text & pdf versions note that the current format is still readable after 44 years (see RFC 20 for an example) how many other SDOs can claim that?

Internet-Draft

IETF working documents

random or non-random thoughts

input to the process

no admissions control other than boilerplate (see IPR)

removed from the main IETF Internet Drafts directory after 6 months or upon replacement

all RFCs must pre-exist as IDs

to deal with IPR handoff, etc.

(other than some IANA or RFC Editor created ones)

Internet Draft (ID) Naming

ID filename used to classify Internet Drafts all ID filenames start with "draft-"

individual IDs continue with the last name of the lead author/editor and, often, the name of the working group the ID is targeted at

Working Group IDs continue with "ietf-WGNAME"

filename continues with subject

filename continues with version number

initial version "00"

filename ends with ".txt" extension

E T F[®]

::<u>::</u>:

Internet Draft (ID) Naming, contd.

examples:

draft-ietf-idr-bgp4-26.txt 26th revision of the BGPv4 specification a product of the Interdomain Routing Working Group draft-bradner-rfc3979bis-06.txt

6th revision of my proposed update to RFC 3979

not a working group document

draft-iab-rfcformatreq-03.txt

3rd revision of an IAB document on requirements for the formats of RFCs

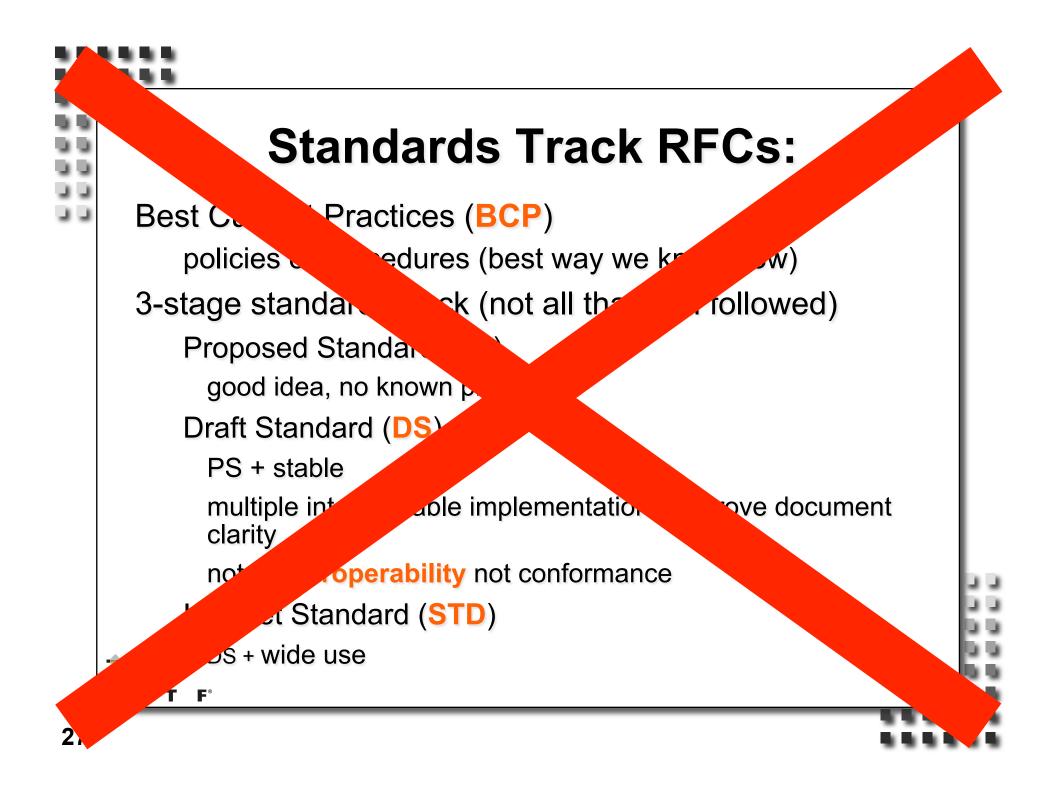

What is a RFC?

IETF document publication series RFC used to stand for "Request for Comments" now just a (brand) name now tend to be more formal documents than early RFCs RFC 1 Host Software - Apr 7 1969 now over 7000 RFCs not all RFCs are standards! see RFC 1796 though some vendors sometimes imply otherwise many types of RFCs

RFC Repository Contains:

standards track poetry OSPF, IPv6, IPsec ... 'Twas the night before startup obsolete Standards white papers RIPv1 On packet switches with infinite storage requirements corporate documentation Host Requirements Ascend multilink protocol policies experimental history **Classless InterDomain** Netblt Routing process documents April Fool's Day jokes **IETF Standards Process IP on Avian Carriers** ... updated for QoS

Standards Track RFCs:

Best Current Practices (**BCP**)

policies or procedures (best way we know how)

2-stage standards track (changed 2011 - RFC 6410)

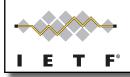

Proposed Standard (PS)

good idea, no known problems

Internet Standard (STD)

PS + stable + "benefit to Internet community"

multiple interoperable implementations to prove document clarity note: interoperability, not conformance

Other RFC Types

Informational

Experimental

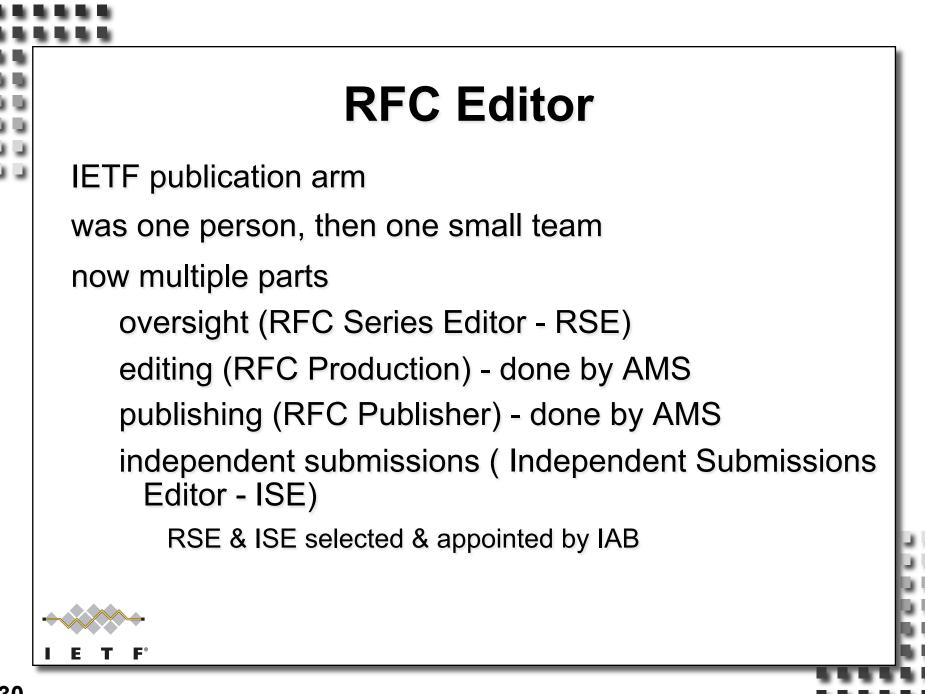

Historical

always check the current status of an RFC before relying on it. A new RFC may have obsoleted or updated the one you are looking at, or it may have been reclassified as Historical

you can find out by looking at the RFC index

remember that RFCs are not changed after publication - so no status change notice put in RFC

RFC Production & Publishing

receives requests to publish IDs from multiple streams IETF (via IESG) IRTF (via IRSG) IAB Independent Submissions (via ISE) edits IDs for publication verify edits with authors

publishes RFCs

Independent Submissions Editor

ISE gets requests to publish IDs

can only publish informational or experimental RFCs

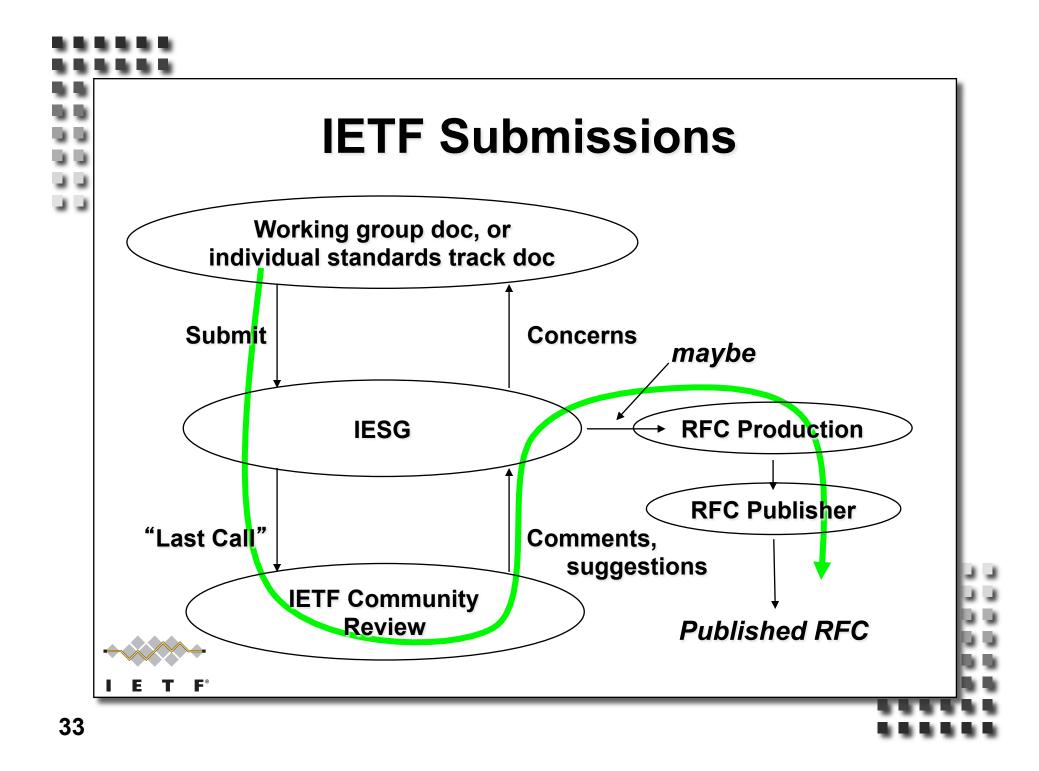

asks IESG for advice

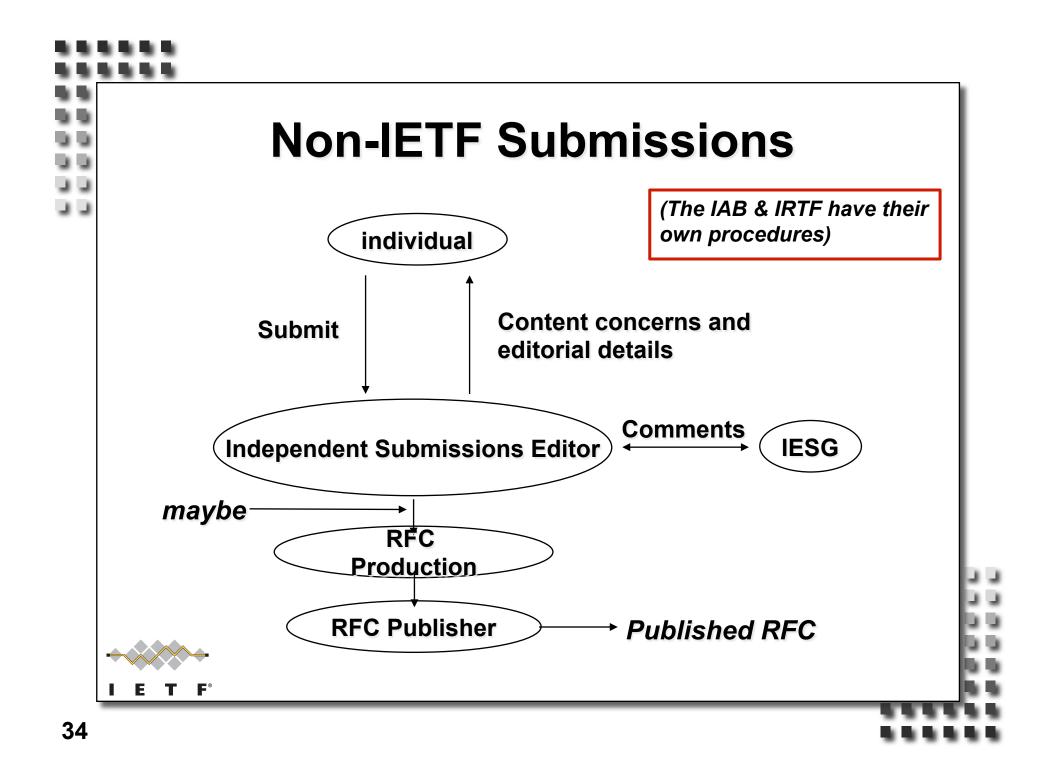

but can exercise own discretion to publish or not

presumption is to publish technically competent and useful IDs

which sometimes is a conflict with IESG

.....

The Role & Scope of the IETF

'above the wire and below the application' IP, TCP, email, routing, IPsec, HTTP, FTP, ssh, LDAP, SIP, mobile IP, ppp, RADIUS, Kerberos, secure email, streaming video & audio, ...

but wires are getting fuzzy

MPLS, GMPLS, pwe3, VPN, ...

generally hard to clearly define IETF scope

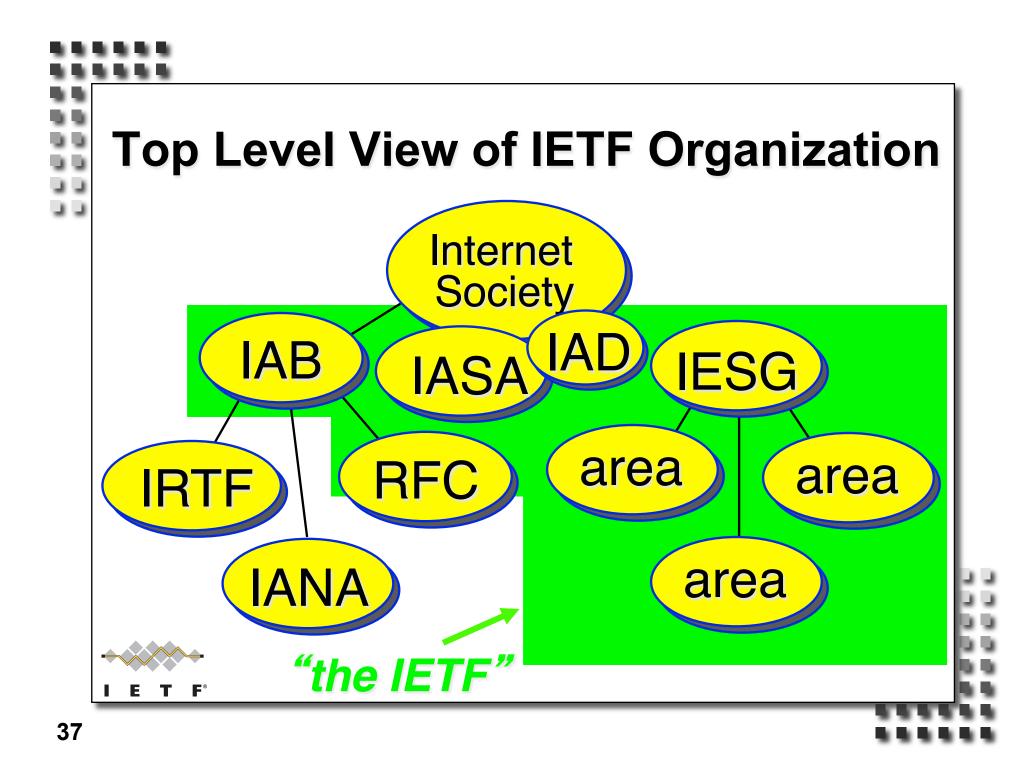

IETF is constantly exploring the edges

e.g. (IP) telephony

Scope of Other SDOs

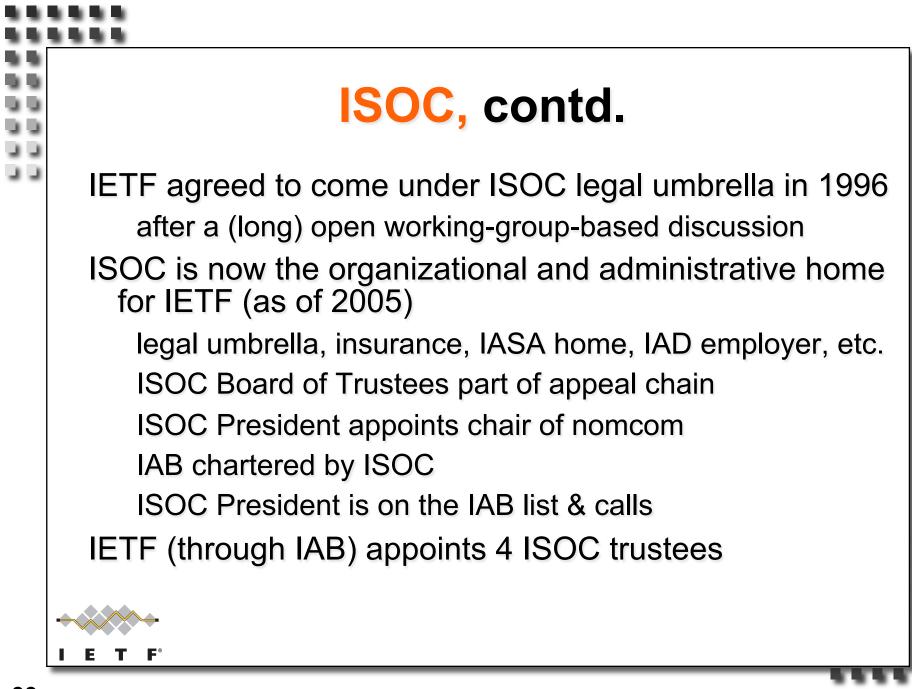

the Internet (& the Internet protocols) are very interesting to other standards development organizations (SDO) Internet is becoming the underpinnings of the entire world telecommunications business other SDOs trying "fix" or "extend" IETF protocols they may be trying to solve a different problem or are making different assumptions problem: what happens when these extensions break underlying protocol assumptions or make non-interoperable versions? SDO (including IETF) assumption: each SDO modifies its own protocols but, see dispute with ITU-T over MPLS for transport

.....

The Internet Society (ISOC)

non-profit, non-governmental, independent, international organization more than 133 organizational members, more than 71,000 individual members &108 chapters in 92 countries formed 1992 to: provide legal umbrella over IETF continue Landweber developing country workshops mission: "To promote the open development, evolution, and use of the Internet for the benefit of all people throughout the world." join at www.isoc.org Interne Socie

.....

Internet Research Task Force (IRTF)

focused on long term problems in Internet Crypto Forum Research Group (CFRG)* Delay-Tolerant Networking Research Group (DTNRG) Global Access to the Internet for All Research Group (GAIA) Internet Congestion Control Research Group (ICCRG)* Information Centric Networking Research Group (ICNRG)* Network Function Virtualization Research Group (NFVRG)* Network Management Research Group (NMRG) Network Coding Research Group (NWCRG) Software-Defined Network Research Group (SDNRG)* proposed Human Rights Protocol Considerations RG* *Meeting this week

.....

Internet Architecture Board (IAB)

provides overall architectural advice & oversight to IESG, IETF, IRTF & ISOC deals with IETF external liaisons appoints IRTF chair selects & oversees IETF-IANA appoints & oversees RFC Editor chartered by & advises the ISOC Board approves IESG slate from nomcom step in appeals chain

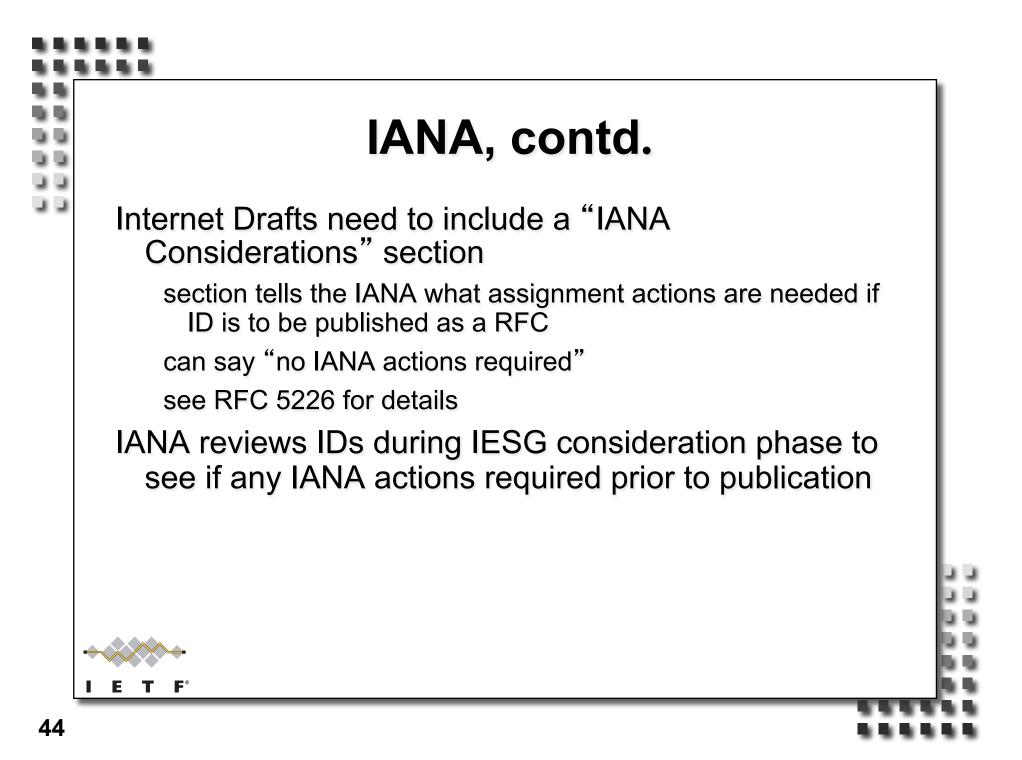

IAB, contd.

provide input to IESG on WG formation & charters sponsor & organize IRTF convene topic-specific workshops mostly invitation only write IDs/RFCs stating IAB opinion with community & IESG review participate in WG discussions IAB activities organized in 9 "programs" IAB members plus others to ensure continuity http://www.iab.org/activities/programs/

IANA

Internet Assigned Number Authority need to record parameters in IETF protocols assigns numbers and keeps them from colliding assigns protocol numbers (ports, MIME types, etc) IP addresses assigns address blocks to 5 regional IP Address registries which assign addresses to ISPs and end sites domain names defines top level domains (TLDs) - e.g., .com, .ca, .us, ... maintains root server database of TLD server addresses the IANA predates the IETF currently preformed by ICANN under a MoU

IETF Management

IETF management are all volunteers

AD job: half to 3/4 time

IAB job: 1/3 time

IETF Chair job: full time

IETF does not pay ADs, IAB members, IAOC members, WG chairs or IETF Chair a salary or expenses

people are company- or self- supported

secretariat, RFC publication support & IAD are paid

E T F°

IETF Secretariat

Association Management Solutions, LLC - Fremont, CA, USA

managed by IETF Administrative Support Activity (IASA)

runs

plenary meetings, mailing lists,

Internet-Draft & directory, IESG teleconferences, REF editing & publication

coordinates

day to day work of IESG

IETF Administrative Support Activity (IASA)

provides the administrative structure required to support the IETF standards process: see RFCs 4071 & 4371

has no authority over the standards process

housed within the Internet Society

creates budget for IETF

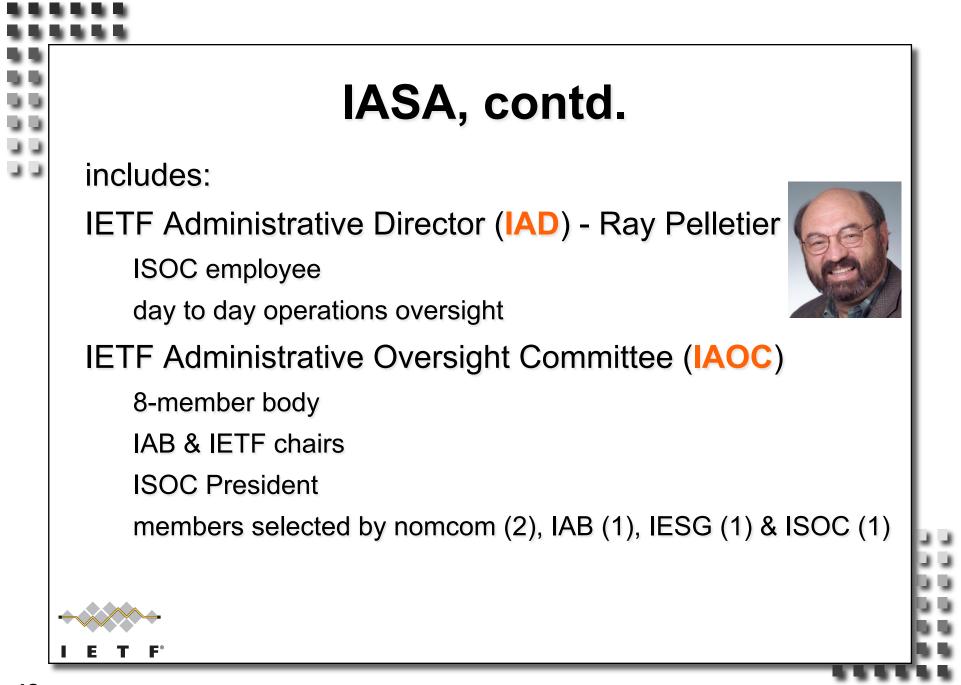

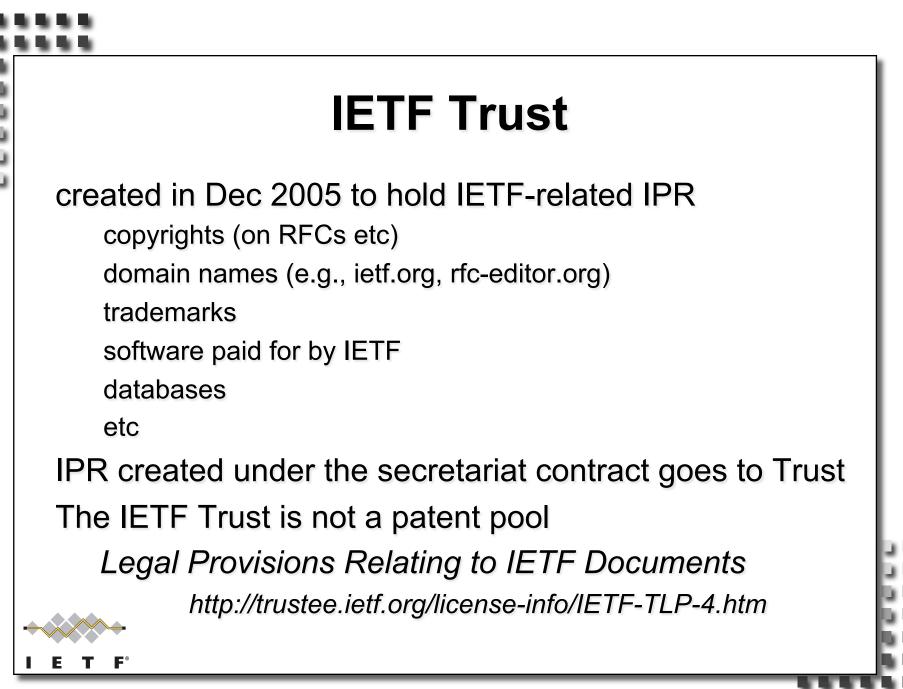

money from meeting fees, meeting-related sponsors & from ISOC responsible for IETF finances

contracts for IETF support functions

Secretariat functions, RFC evaluation and publication & IETF-IANA deals with IETF IPR

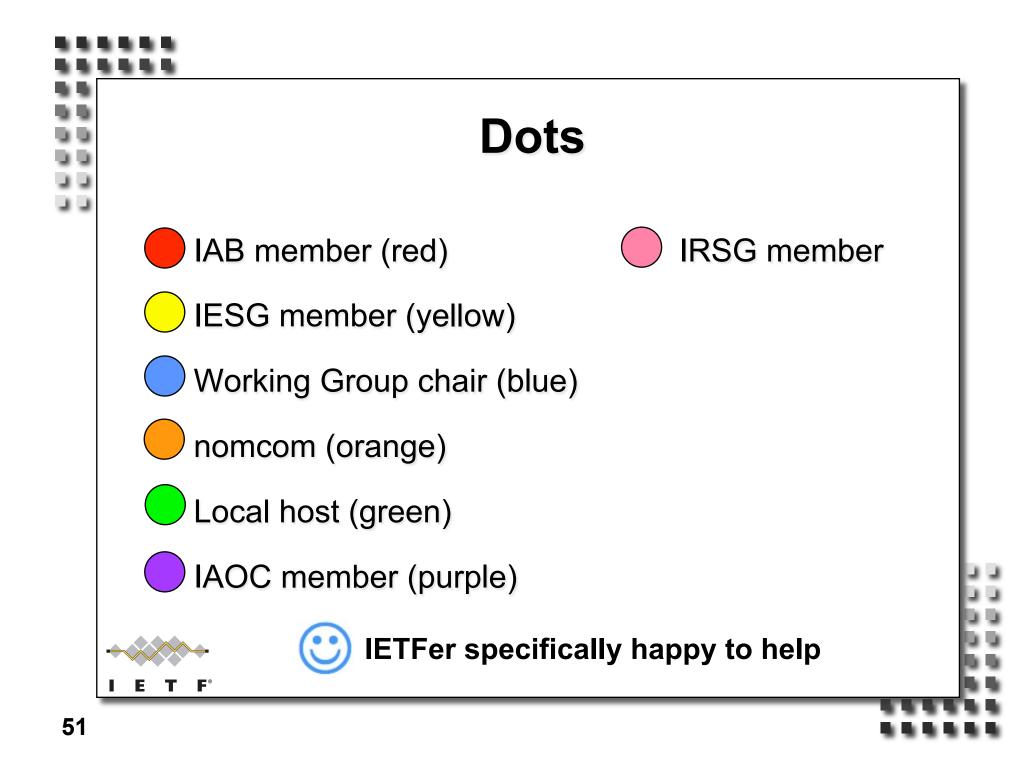

::<u>:::</u>:

Selecting IETF Management

picked by a nominations committee (nomcom) nomcom chair appointed by ISOC president process described in RFC 3777 members selected randomly from list of volunteers requirement: present at 3 of last 5 IETF meetings very random process to select from volunteers: RFC 3797 gets list of jobs to fill can include IETF Chair, IESG, IAB & IAOC members nominate one person for each job IAOC selections approved by IESG, IESG & IETF Chair selections approved by IAB, IAB selections approved by **ISOC BoT**

Appeals Process

IETF decisions can be appealed start level above decision being appealed 1st to the WG chair(s) only then to the Area Director only then to the IESG only then to the IAB if claim is that the process itself is broken, (not that the process was not followed) then an appeal can be made to the ISOC Board (after the above is complete) it is OK to appeal decisions – people do (& succeed) but appeals are not quick starting "low" is the right thing to do

Intellectual Property Rights

IPR is a very big issue in standards bodies two areas:

copyright in documents

patents covering standards technology

IPR (Copyright)

ID author(s) need to give non-exclusive publication rights to IETF Trust if to be published at all also (normally) the right to make derivative works this right required for standards track documents author(s) retain all other rights

Rules described in RFC 5378 IETF Trust released a FAQ on IETF copyright see http://trustee.ietf.org/faqs.html

IPR (Patents)

IETF IPR (patent) rules (in RFC 3979) require timely **disclosure** of your own IPR in your own submissions & submissions of others disclosures published on IETF web site "reasonably and personally" known to the WG participant - i.e., no patent search required WG may take IPR into account when choosing solution RFC 3669 gives background and guidance push from open source people for RF-only process consensus to not change to mandatory RF-only but many WGs tend to want RF or IPR-free (or at least assumed to be IPR-free) update in the works

Note Well

- The "Note Well" statement shows up a lot at the IETF.
 Mailing lists, registration, meeting openings, etc.
 defines "contribution" and requires obeying IETF rules
 In effect, a "contribution" is anything you say or
 write with the intent to effect the IETF standards
 process
- if you make a contribution that includes or relates to your IPR you must disclose that fact
- Note Well note is undergoing revision big discussion on IETF discussion mailing list

IETF Mentoring Program

match experienced IETF participants with newcomers
to aid newcomer integration into the IETF community
through advice, help, and collected wisdom
for more information or to request a mentor see:
http://www.ietf.org/resources/mentoring-program.html

::<u>:::</u>:

Other IETF Training/Tutorials

- 1300 1450 Newcomer's Orientation <- you are here
- 1300 1450 Working Group Leadership
- 1400 1700 YANG Advice and Editing Session
- 1500 1650 Transport Area Overview
- 1500 1650 Writing RFCs and I-Ds in markdown and a bit of YAML
- 1600 1700 Newcomer's Meet and Greet newcomers, WG chairs & ADs
- 1700 1900 Welcome Reception

(talking to IETF people is often quite an education!)

::		
0000	Newcomer's Dinner	
55	informal dinner for newcomer's to chat about their experience	
	meet at the IETF registration desk at 7:30 PM Monday	
	walk to nearby reasonably priced restaurant	
	please email Maddy Conner (mconner@amsl.com) if you would like to attend or for more information	
	IET F°

What next?

join mailing lists

this is where the work happens but read (and understand) before writing read the drafts & contribute don't be shy (but do not come on too strong) talk with (not just to) people treat everyone with respect, even if you disagree look for common ground

don't settle for second-rate discussion or technology

ETF
