# The IETF: Standards and non-Standards

Scott Bradner  
Harvard University  
sob@harvard.edu

IETF - 1

© 1999 Scott Bradner

## Outline

---

- ◆ IETF overview
- ◆ IETF IP QoS work
- ◆ smart wires

IETF - 2

© 1999 Scott Bradner

## What is the IETF?

---

- ◆ an engineering organization
- ◆ a group of people who solve Internet problems

IETF - 3

© 1999 Scott Bradner

## An Engineering Organization

---

- ◆ vendors
- ◆ users
- ◆ network operators
- ◆ academics
- ◆ researchers
- ◆ all as individuals
- ◆ no membership

IETF - 4

© 1999 Scott Bradner

## A Short History of the IETF

---

- ◆ initial DARPA research in 1970's using NCP
  - Telnet
  - file transfer
  - electronic mail
- ◆ production network
  - definition of Internet Activities Board (IAB)
  - IP4 and TCP deployed 1981-1983
  - MILNET/ARPANET division 1983

IETF - 5

© 1999 Scott Bradner

## IAB Oversight Period

---

- ◆ 1986
  - Internet Assigned Number Authority (IANA)
  - Internet Research Task Force (IRTF)
  - Internet Engineering Task Force (IETF)
  - some other task forces
- ◆ 1987
  - Working groups
- ◆ 1988
  - Internet Engineering Steering Group (IESG)

IETF - 6

© 1999 Scott Bradner

## IAB Oversight Period, contd.

---

- ◆ 1989
  - dissolution of other task forces
- ◆ 1992
  - leadership redefined
  - IAB => "Internet Architecture Board"
  - IESG: manages the IETF & approve standards

IETF - 7

© 1999 Scott Bradner

## 1992: Internet Society Oversight

---

- ◆ process evolution (poised/poison)
  - Standards track detailed - RFC 2026
  - Intellectual property rights (IPRs)
  - Handling of appeals
- ◆ Internet Society: interface to outside world
  - Corporate / legal umbrella
  - Evangelism - INET conference
  - Policy areas

IETF - 8

© 1999 Scott Bradner

## The Role of IETF in the Development of the Internet

---

- ◆ protocol definition
- ◆ infrastructure issues

IETF - 9

© 1999 Scott Bradner

## Protocol Definition

---

- ◆ all infrastructure protocols since 1986
- ◆ Examples:
  - PPP
  - OSPF
  - SNMP
  - HTTP 1.1
  - ...

IETF - 10

© 1999 Scott Bradner

## Infrastructure Issues

---

- ◆ routing and addressing
  - IP6 addressing
  - network address translation
  - BGP policy routing
- ◆ security
  - IPSEC authentication
  - IPSEC encryption
  - ISAKMP key exchange

IETF - 11

© 1999 Scott Bradner

## Infrastructure Issues, contd.

---

- ◆ next generation issues
  - IP/ATM
  - Label switching
- ◆ quality of service issues
  - intserv
  - RSVP
  - diffserv

IETF - 12

© 1999 Scott Bradner

## The Relationship Between the IETF and Other Standards Bodies

---

- ◆ ITU-T
- ◆ ATM forum
- ◆ IEEE
- ◆ W3C
- ◆ DAVIC
- ◆ ...

IETF - 13

© 1999 Scott Bradner

## Types of Standards

---

- ◆ de jure standards
- ◆ de facto standards
  - corporate consortia
  - individual efforts

IETF - 14

© 1999 Scott Bradner

## De Jure Bodies

---

- ◆ ITU-T
- ◆ ISO
- ◆ IEEE
- ◆ ANSI

IETF - 15

© 1999 Scott Bradner

## Closed Industry Consortia

---

- ◆ W3C
- ◆ DAVIC
- ◆ ATM Forum
- ◆ Frame Relay Forum

IETF - 16

© 1999 Scott Bradner

## McLuhan's global village

---

IETF

IETF - 17

© 1999 Scott Bradner

## IETF "Standards"

---

- ◆ standards only because people use them
- ◆ no formal recognition
- ◆ no submitting to "traditional" bodies

IETF - 18

© 1999 Scott Bradner

## Relationships:

---

- ◆ liaisons / representatives  
ITU-T, ISO study groups, ATM Forum ...
- ◆ share people with other organizations  
more effective than formal liaisons  
but confuse other standards organizations
- ◆ growing area but culture clash  
IETF is mostly bottoms up
- ◆ new-work mailing list  
to pre announce new working groups and BOFs  
for representatives of other standards groups

IETF - 19

© 1999 Scott Bradner

---

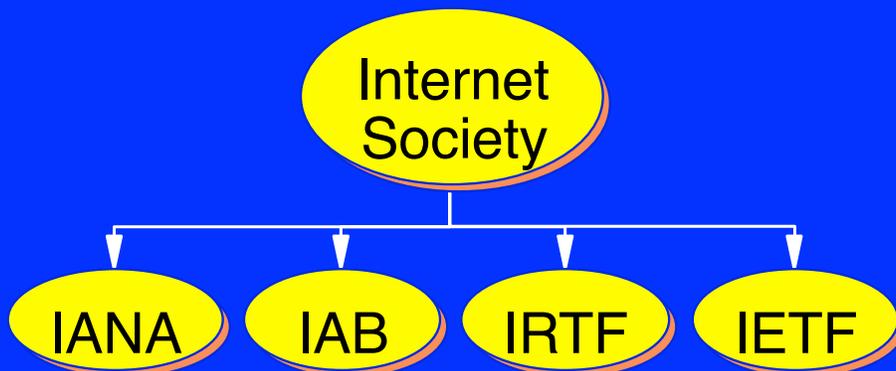

## The IETF Standards Process

IETF - 20

© 1999 Scott Bradner

## Top Level View of Organization

---

IETF - 21

© 1999 Scott Bradner

## Internet Research Task Force (IRTF)

---

- ◆ focused on long term problems in Internet
  - reliable multicast
  - multicast routing
  - congestion management
  - end to end protocols
  - etc.

IETF - 22

© 1999 Scott Bradner

## Internet Assigned Number Authority (IANA)

---

- ◆ assigns numbers and keeps them from colliding
  - Protocol numbers
  - IP addresses
    - mostly delegated to IP Address registries
  - Names
    - mostly delegated to DNS name registries
- ◆ working out relationship between ICANN & IETF over IANA protocol related functions

IETF - 23

© 1999 Scott Bradner

## Protocol numbers

---

- ◆ IP protocol numbers
- ◆ well known TCP/UDP ports
- ◆ PPP protocol ids
- ◆ MIME types
- ◆ etc.

IETF - 24

© 1999 Scott Bradner

## RFC Editor

---

- ◆ was Jon Postel et al  
now et al
- ◆ rfc-ed@isi.edu
- ◆ supported by the Internet Society

IETF - 25

© 1999 Scott Bradner

## IETF Chair

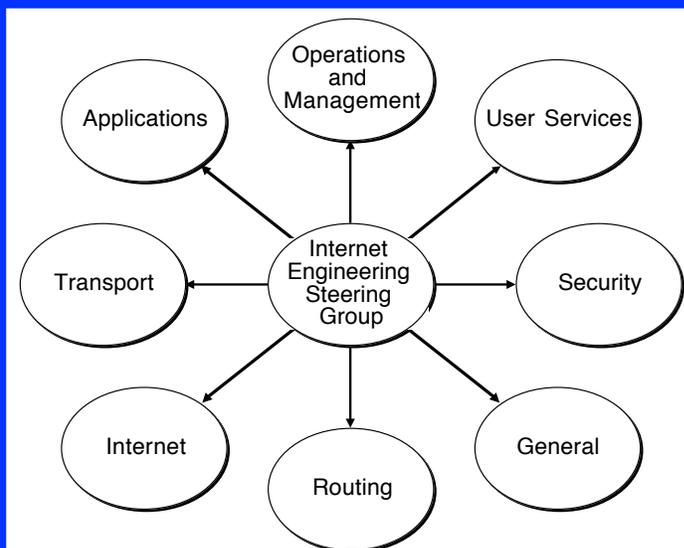

---

- ◆ chair of IESG
- ◆ selected by nomcom
- ◆ director of General Area
- ◆ ex officio member of IAB
- ◆ Chief Talking (and traveling) Officer

IETF - 26

© 1999 Scott Bradner

## IETF Areas

IETF - 27

© 1999 Scott Bradner

## Area Directors

- ◆ selected by nomcom
- ◆ 2 year terms
- ◆ most Areas have 2 ADs
- ◆ responsible for setting direction in Area
- ◆ responsible for managing process in Area  
approve BOFs & working groups

IETF - 28

© 1999 Scott Bradner

## BOFs

---

- ◆ usually precede formation of a Working Group
- ◆ group of people interested in a topic
- ◆ convince an AD that they have a good idea - one worth exploring
- ◆ need description and agenda before a BOF can be scheduled
- ◆ BOFs generally only meet once
- ◆ can lead to a WG or can be a one time thing

IETF - 29

© 1999 Scott Bradner

## Working Groups

---

- ◆ this is where the IETF primarily get its work done
- ◆ focused by charter agreed between chair and area director
  - specific deliverables
  - documents and timetable
- ◆ approved by IESG with IAB guidance
- ◆ AD with IESG has final say on charter

IETF - 30

© 1999 Scott Bradner

## IETF Areas

---

- ◆ Applications Area
- ◆ General Area
- ◆ Internet Area
- ◆ Operations and Management Area
- ◆ Routing Area
- ◆ Security Area
- ◆ Transport Area
- ◆ User Services Area

IETF - 31

© 1999 Scott Bradner

## General Area

---

- ◆ Area director(s)  
Fred Baker <fred@cisco.com>
- ◆ Working groups:
  - Authentication, Authorization and Accounting (aaa)
  - Policy Framework (policy)
  - Process for Organization of Internet Standards ONgoing (poisson)

IETF - 32

© 1999 Scott Bradner

## Applications Area

### ◆ Area director(s)

Keith Moore <moore@cs.utk.edu>

Patrik Faltstrom <paf@swip.net>

### ◆ Working groups:

Application Configuration Access Protocol (acap)

Application MIB (applmib)

Calendaring and Scheduling (calsch)

Common Indexing Protocol (find)

Content Negotiation (conneg)

DAV Searching and Locating (dasl)

Detailed Revision/Update of Message Standards (drums)

Electronic Data Interchange-Internet Integration (ediint)

Extensions to FTP (ftpext)

HyperText Transfer Protocol (http)

Instant Messaging and Presence Protocol (impp)

Internet Fax (fax)

Internet Open Trading Protocol (trade)

Internet Printing Protocol (ipp)

LDAP Duplication/Replication/Update Protocols (ldup)

LDAP Extension (ldapext)

Large Scale Multicast Applications (lsma)

MIME Encapsulation of Aggregate HTML Documents (mhtml)

Mail and Directory Management (madman)

Message Tracking Protocol (msgtrk)

NNTP Extensions (nntpext)

Printer MIB (printmib)

Schema Registration (schema)

Telnet TN3270 Enhancements (tn3270e)

Uniform Resource Locator Registration Procedures (urlreg)

Uniform Resource Names (urn)

Usenet Article Standard Update (usefor)

WWW Distributed Authoring and Versioning (webdav)

Web Replication and Caching (wrec)

IETF - 33

© 1999 Scott Bradner

## Internet Area

### ◆ Area director(s)

Jeffrey Burgan <burgan@corp.home.net>

Thomas Narten <narten@raleigh.ibm.com>

### ◆ Working groups:

AToM MIB (atommib)

DNS IXFR, Notification, and Dynamic Update (dnsind)

Dynamic Host Configuration (dhc)

Frame Relay Service MIB (frnetmib)

IP Over Fibre Channel (ipfc)

IP Over IEEE 1394 (ip1394)

IP over Cable Data Network (ipcdn)

IP over VBI (ipvbi)

IPNG (ipngwg)

Interfaces MIB (ifmib)

Internetworking Over NBMA (ion)

PacketWay (pktway)

Point-to-Point Protocol Extensions (pppext)

Service Location Protocol (svrloc)

IETF - 34

© 1999 Scott Bradner

## Operations and Management Area

### ◆ Area director(s)

Randy Bush <randy@psg.com>

Bert Wijnen <wijnen@vnet.ibm.com>

### ◆ Working groups:

ADSL MIB (adslmib)

Benchmarking Methodology (bmwg)

Bridge MIB (bridge)

Distributed Management (disman)

Entity MIB (entmib)

Ethernet Interfaces and Hub MIB (hubmib)

G and R for Security Incident Processing (grip)

MBONE Deployment (mboned)

Network Access Server Requirements (nasreq)

Next Generation Transition (ngtrans)

Physical Topology MIB (ptopomib)

Remote Authentication Dial-In User Service (radius)

Remote Network Monitoring (rmonmib)

Roaming Operations (roamops)

Routing Policy System (rps)

SNMP Agent Extensibility (agentx)

SNMP Version 3 (snmpv3)

The Internet and the Millennium Problem (2000)

Uninterruptible Power Supply (upsmib)

IETF - 35

© 1999 Scott Bradner

## Routing Area

### ◆ Area director(s)

Rob Coltun <rcoltun@lightera.com>

TBA

### ◆ Working groups:

Data Link Switching MIB (dlswmib)

General Switch Management Protocol (gsmpp)

IP Routing for Wireless/Mobile Hosts (mobileip)

IS-IS for IP Internets (isis)

Inter-Domain Multicast Routing (idmr)

Inter-Domain Routing (idr)

Mobile Ad-hoc Networks (manet)

Multicast Extensions to OSPF (mospf)

Multicast Source Discovery Protocol (msdp)

Multiprotocol Label Switching (mpls)

Open Shortest Path First IGP (ospf)

Protocol Independent Multicast (pim)

QoS Routing (qosr)

Routing Information Protocol (rip)

SNA DLC Services MIB (snadlc)

SNA NAU Services MIB (sna nau)

UniDirectional Link Routing (udlr)

IETF - 36

© 1999 Scott Bradner

## Security Area

### ◆ Area director(s)

Jeffrey Schiller <jjs@mit.edu>

Marcus Leech <mleech@nortel.ca>

### ◆ Working groups:

An Open Specification for Pretty Good Privacy (openpgp)

Authenticated Firewall Traversal (aft)

Common Authentication Technology (cat)

Domain Name System Security (dnssec)

IP Security Protocol (ipsec)

Intrusion Detection Exchange Format (idwg)

One Time Password Authentication (otp)

Public-Key Infrastructure (X.509) (pkix)

One Time Password Authentication (otp)

Public-Key Infrastructure (X.509) (pkix)

S/MIME Mail Security (smime)

Secure Shell (secsh)

Simple Public Key Infrastructure (spki)

Transport Layer Security (tls)

Web Transaction Security (wts)

IETF - 37

© 1999 Scott Bradner

## Transport Area

### ◆ Area director(s)

Scott Bradner <sob@harvard.edu>

Vern Paxson <vern@ee.lbl.gov>

### ◆ Working groups:

Audio/Video Transport (avt)

Differentiated Services (diffserv)

IP Performance Metrics (ippm)

IP Telephony (iptel)

Integrated Services (intserv)

Integrated Services over Specific Link Layers (issll)

Media Gateway Control (megaco)

Multicast-Address Allocation (malloc)

Multiparty Multimedia Session Control (mmusic)

Network Address Translators (nat)

Network File System Version 4 (nfsv4)

ONC Remote Procedure Call (oncrpc)

PSTN and Internet Internetworking (pint)

RSVP Admission Policy (rap)

Realtime Traffic Flow Measurement (rtfm)

Resource Reservation Setup Protocol (rsvp)

Signaling Transport (sigtran)

TCP Implementation (tcpimpl)

TCP Over Satellite (tcpsat)

IETF - 38

© 1999 Scott Bradner

## User Services Area

---

- ◆ Area director(s)
  - April Marine <amarine@globe.arc.nasa.gov>
- ◆ Working groups:
  - Responsible Use of the Network (run)
  - User Services (uswg)

IETF - 39

© 1999 Scott Bradner

## IETF Secretariat

---

- ◆ located physically
  - Corporation for National Research Initiatives (CNRI)
  - Reston Virginia (Washington DC)
- ◆ runs
  - plenary meetings
  - mailing lists
  - Internet draft directory
- ◆ coordinates
  - day to day work of IESG and working groups

IETF - 40

© 1999 Scott Bradner

## What is a “Request For Comments” (RFC)?

---

- ◆ not all RFCs are standards!  
    though some vendors imply otherwise
- ◆ many types of RFCs

IETF - 41

© 1999 Scott Bradner

## RFC Repository Contains:

---

- |                               |  |
|-------------------------------|--|
| ◆ Standards                   | ◆ poetry                                 |
| OSPF                          | ‘Twas the night before startup           |
| ◆ Obsolete Standards          | ◆ white papers                           |
| RIPv1                         | On packet switches with infinite storage |
| ◆ requirements                | ◆ corporate documentation                |
| Host Requirements             | Ascend multilink protocol (mp+)          |
| ◆ policies                    | ◆ experimental history                   |
| Classless InterDomain Routing | Netblt                                   |
| ◆ April fool’s day jokes      |  |
| IP on Avian Carriers          |  |

IETF - 42

© 1999 Scott Bradner

## Working Papers

---

- ◆ Internet-Draft
  - random or non-random thoughts
  - input to the process
  - zapped after 6 months
  - all RFCs must pre-exist as IDs

IETF - 43

© 1999 Scott Bradner

## IETF Approval Process

---

- ◆ rough consensus
  - unanimous agreement not required
- ◆ Working Group “last-call”
  - two week comment period in working group
- ◆ IETF “last-call”
  - two week IETF-wide comment period
- ◆ IESG review

IETF - 44

© 1999 Scott Bradner

## Standards Track Levels:

---

- ◆ Best Current Practices (BCP)  
generally policies or procedures
- ◆ Proposed Standard (PS)  
good idea, no known problems
- ◆ Draft Standard (DS)  
multiple interoperable implementations
- ◆ Standard (STD)  
wide use
  
- ◆ fly before buy

IETF - 45

© 1999 Scott Bradner

## Archives

---

- ◆ Informational (FYI)
- ◆ Experimental
- ◆ Historical

IETF - 46

© 1999 Scott Bradner

## Transport Area QoS Working Groups

---

- ◆ Integrated Services (intserv)
  - guaranteed and controlled load services
- ◆ Integrated Services over Specific Link Layers (issll)
  - Intserv for various link types, including ATM
- ◆ Resource Reservation Setup Protocol (rsvp)
  - signaling protocol for Integrated Services networks
  - may become general IETF signaling protocol

IETF - 47

© 1999 Scott Bradner

## TSV Area QoS Working Groups, contd.

---

- ◆ RSVP Admission Policy (rap)
  - router <-> policy server protocol for RSVP
- ◆ Differentiated Services (diffserv)
  - non-flow based QoS protocols
- ◆ IP Performance Metrics (ippm)
  - measure performance of networks

IETF - 48

© 1999 Scott Bradner

## IEEE Related IETF Work

---

- ◆ “IP over foo” - started in 1985
  - RFC 948 - Two methods for the transmission of IP datagrams over IEEE 802.3 networks (OBS)
  - RFC 1042 - Standard for the transmission of IP datagrams over IEEE 802 networks (STD)
  - RFC 1390 - Transmission of IP and ARP over FDDI Networks
  - RFC 2464 - Transmission of IPv6 Packets over Ethernet Networks
  - RFC 2470 - Transmission of IPv6 Packets over Token Ring Networks
  - RFC 2467 - Transmission of IPv6 Packets over FDDI Networks

IETF - 49

© 1999 Scott Bradner

## IEEE Related IETF Work, contd.

---

- ◆ MIBs
  - RFC 1230 - IEEE 802.4 Token Bus MIB
  - RFC 1231 - IEEE 802.5 Token Ring MIB
  - RFC 1368 - Definition of Managed Objects for IEEE 802.3 Repeater Devices
  - RFC 1512 - FDDI Management Information Base
  - RFC 1515 - Definitions of Managed Objects for IEEE 802.3 Medium Attachment Units (MAUs)
  - RFC 1516 - Definitions of Managed Objects for IEEE 802.3 Repeater Devices
  - RFC 1743 - IEEE 802.5 MIB using SMIv2

IETF - 50

© 1999 Scott Bradner

## IEEE Related IETF Work, contd.

---

- ◆ more MIBs

- RFC 1749 - IEEE 802.5 Station Source Routing MIB using SMIV2

- RFC 2108 - Definitions of Managed Objects for IEEE 802.3 Repeater Devices using SMIV2

- RFC 2239 - Definitions of Managed Objects for IEEE 802.3 Medium Attachment Units (MAUs) using SMIV2

- RFC 2266 - Definitions of Managed Objects for IEEE 802.12 Repeater Devices

## IETF QoS IEEE-Related Work

---

- ◆ issll working group is prime focus of QoS work

- ◆ three Internet-Drafts

- A Framework for Providing Integrated Services Over Shared and Switched IEEE 802 LAN Technologies

- SBM (Subnet Bandwidth Manager): A Protocol for RSVP-based Admission Control over IEEE 802-style networks

- Integrated Service Mappings on IEEE 802 Networks

## Use of IEEE MAC Addresses in IPv6

- ◆ RFC 2374 - An IPv6 Aggregatable Global Unicast Address Format

3	13	8	24	16	64
FP	TLA	res	NLA	SLA	interface ID

FP	format prefix
TLA	top-level aggregation identifier
res	reserved for future use
NLA	next-level aggregation identifier
SLA	site-level aggregation identifier
interface ID	interface identifier

IETF - 53

© 1999 Scott Bradner

## IPv6 Interface ID

- ◆ 64 bits
- ◆ 8-byte (or expanded 6-byte) MAC address of interface
- ◆ can also use DHCPv6
- ◆ 1st 3 bytes of interface ID

c c c c	c c u g	c c c c	c c c c	c c c c	c c c c
---------	---------	---------	---------	---------	---------

c = bit of company id  
u = universal / local bit (complemented)  
g = individual / group bit

IETF - 54

© 1999 Scott Bradner

## Cooperation with Other Standards Groups

---

- ◆ ideal - multiple groups work on one protocol  
published by one group to prevent out of sync versions  
e.g. Internet FAX, RTP
- ◆ real - does not always happen  
too many groups working in telephony area  
other groups finding IETF's area important  
differences in architectural view  
IETF has a "stupid network" bias

IETF - 55

© 1999 Scott Bradner

## Smart Wires

---

- ◆ in an end to end world, smart link-layers are a concern
- ◆ "qos" has different meanings in link-layers  
prioritization - e.g. 802.1Q  
flow control - e.g. ATM ABR
- ◆ prioritization can be very helpful if packet mapping  
can cooperate with end-to-end signaling  
e.g. RSVP & intserv  
issll is802 work an example

IETF - 56

© 1999 Scott Bradner

## Smart Wires Which Know Better

---

- ◆ link-level flow control can be an issue
- ◆ creates layered control systems with different characteristics at the different layers
  - what is effect on end-to-end flow management of random (to the ends) changes in apparent link latency?
- ◆ one answer offered is 1 RTT worth of buffering per session at entry points
  - may deal with loss but far from clear effect on flow rate

IETF - 57

© 1999 Scott Bradner

## End-to-End is TCP

---

- ◆ much of current data traffic is TCP/IP
  - growing, but still small, amount of UDP (e.g. RTP)
  - some other protocols being worked on
- ◆ TCP flow control developed over many years
- ◆ multiple phases
  - slow start
  - congestion avoidance
  - loss response
- ◆ effect of a link-layer flow-control has to be understood for each phase

IETF - 58

© 1999 Scott Bradner

## Prediction

---

- ◆ classical control system theory recommends against layered control systems
- ◆ effect on TCP not well known
  - same for other end-to-end rate control protocols
- ◆ seems to be more of a research rather than a standards item today
- ◆ prediction - data systems will make little use of link-level flow control systems when end-to-end is longer than a link
  - unless interconnection devices are part of end to end signaling mechanism

IETF - 59

© 1999 Scott Bradner

---

Questions?

IETF - 60

© 1999 Scott Bradner
