

The *Flying Cloud* had 6 water barrels, 3 on each side of the deck house. These barrels were filled at sea from a 3,000 gallon iron water tank located in the hold aft of the main mast. This design based on NRG *Ship Modeler's Shop Notes volume 1* page 116-117 and on a 1880s photograph of the deck of the *Sea Witch*

The barrels were tied down to rings in the deck and in the side of the house.

nts = not to scale

### FLYING CLOUD - WATER BARREL
